RE: Notification of Compliance Achieved.

Dear Mr. Sudduth:

I appreciated your cooperation during my visit to your facility on September 7, 2011.

As you know, Governor Christine Gregoire has made the cleanup of Puget Sound a priority for Ecology. The Urban Waters Initiative strengthens efforts to identify sources of pollution in and around Puget Sound by working with businesses to address those sources.

Based on my inspection, it appears your facility is in compliance with the compliance items I inspect. However I recommend the following waste and stormwater management improvements:

- Have your hazardous waste service provider test your neutralizing tank sludge and your waste ink/alcohol to verify they are non-hazardous. Keep records of the test results on site;
- Increase the sweeping of debris and cleanup of oil spots, focusing on your loading docks.

The EPA has jurisdiction over stormwater issues at your site and they will most likely be in contact with you shortly in that regard.

Thank you for your continuing efforts. Together we can improve the condition of Puget Sound waters. If you have any questions or concerns, please contact Barbara Smith at (425) 649-7026 or email her at BSMI461@ecy.wa.gov.

Sincerely,

Donovan Gray, Urban Waters Inspector
